

CPU- Central Processing Unit
 Brain of the computer.
 In every piece of modern technology.
 They are able to contain high amounts
 of data and storage in a small amount
 of space.

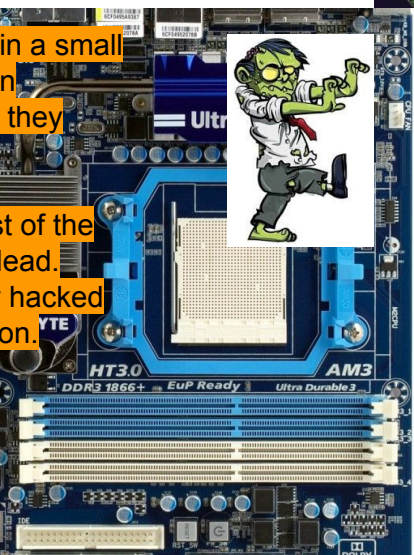

Sources and Examples:
 Samsung, Apple,
 NASA, McAfee,
 Lifewire, Mercury News,
 The Scientific World Journal.

Pro- A lot of data and storage in a small
 area or volume. Whereas when
 computers were first invented, they
 took up most of the room.

Con- Without the CPU, the rest of the
 computer is essentially brain dead.
 They could also be very easily hacked
 without any caution or protection.

Economy- All modern professions are
 achieved faster and easier due to CPUs.

Culture- People from opposite sides of the
 world can now communicate and spread
 their culture instantly due to the internet.

Society- People are becoming less
 connected to the world around them, and
 begin to forget about their friends, family, and
 the physically real world.
